If you want to learn the job offer negotiation secrets that top executives know and use to power your own career and financial future forward, then this is the book for you. Robin Bond is an employment attorney who represents executives in negotiating employment and severance deals. She has seen what works in the real world - and what doesn't. Robin's new book, *How to Negotiate a Killer Job Offer*, is the timely response we've all been waiting for to the conversation around *Lean In: Women, Work, and the Will to Lead*, the book by Sheryl Sandberg, COO of Facebook. Based upon the thousands of clients who have learned how to negotiate a job offer using her proactive negotiation process, Attorney Bond has distilled her negotiating secrets into a short, nuts-and-bolts, how-to employment guide that helps employees level the playing field in job offer negotiation. Robin helps answer the questions about how you get the pay you deserve, how you own the power you have and how you leverage it to get what you want in salary negotiations. Bond's strategies for negotiating success can be successfully applied to any situation. For example, readers can and will apply her WIIFM Factors ("what's in it for me") in any

The biohealthcare executive in upper-middle management confronts leadership challenges unique to their industry: they manage highly specialized knowledge workers and innovators, compete at the speed of technology, work in a highly regulated environment where "free speech" often does not apply due to patient safety and privacy concerns, and increasingly are leading virtual teams who may be located in different parts of the world. Practical leadership for biopharmaceutical executives is a guide that strips away the theory and meets head-on the practical leadership challenges these executives face on a daily basis, and provides these "innovator leaders" with the tools to lead effectively in the face of technological complexity. Focuses on personal leadership, where the executive has an opportunity to manage his/her own effectiveness as a leader and manager, and engage with their own career development and method of contribution within their chosen industry Discusses particularly the unique leadership challenges in biohealthcare: an industry that is at once highly innovative and emotive. Biohealthcare companies are often viewed with suspicion by the consumers who

### **Science, the Endless Frontier**

Career changes are becoming common among professionals in recent years. Many physicians may want to change direction, but often do not know whether it is the right thing to do or if pursuing a career outside of clinical practice would achieve their professional goals. Doctors have the training and education to contribute to society in many beneficial ways in addition to traditional clinical practice. Yet, there is no formal mapped-out route for doctors who want to pursue alternative careers, which is where Careers Beyond Clinical Medicine comes in. Doctors at any stage, from early in training to mid-career, to nearing retirement, can use Careers Beyond Clinical Medicine to clearly evaluate the issues involved when considering a career change. This book shows physicians how they can serve society and patients in innovative ways, and make a notable impact on health care delivery, policy and quality when they use their medical background in a non-traditional career pursuit. The numerous unadvertised opportunities for physicians are explored and a step-by-step route with practical advice for finding the best career is described. Recent advances in healthcare technology, medical science, patient education require physicians to play new roles that have not traditionally been well-defined. Doctors can innovate and have a long-term productive impact on healthcare in the United States and throughout the world if they learn to seize the non-traditional career opportunities available to physicians, or even create a new way to fill a void in health care. Careers Beyond Clinical Medicine helps illuminate that path.

The number of psychiatric researchers does not seem to be keeping pace with the needs and opportunities that exist in brain and behavioral medicine. An Institute of Medicine committee conducted a broad review of the state of patient-oriented research training in the context of the psychiatry residency and considered the obstacles to such training and strategies for overcoming those obstacles. Careful consideration was given to the demands of clinical training. The committee concluded that barriers to research training span three categories: regulatory, institutional, and personal factors. Recommendations to address these issues are presented in the committee's report, including calling for research literacy requirements and research training curricula tailored to psychiatry residency programs of various sizes. The roles of senior investigators and departmental leadership are emphasized in the report, as is the importance of longitudinal training (e.g., from medical school through residency and fellowship). As there appears to be great interest among numerous stakeholders and a need for better tracking data, an overarching recommendation calls for the establishment of a national body to coordinate and evaluate the progress of research training in psychiatry.

jobs after the postdoc period has discouraged many domestic students from pursuing graduate postdoc training. In the United States, more than 50 percent of the postdoc workforce is made up of individuals who obtained their Ph.D.s from other countries. Indeed, one can make a strong argument that the influx of highly trained and creative foreigners has contributed greatly to U.S. science over the past 70 years. Research Training in the Biomedical, Behavioral, and Clinical Research Sciences discusses a number of important issues, including: the job prospects for postdocs completing their training; questions about the continued supply of international postdocs in an increasingly competitive world; the need for equal, excellent training for all graduate students who receive NIH funding; and the need to increase the diversity of trainees. The book recommends improvements in minority recruiting, more rigorous and extensive training in the responsible conduct of research and ethics, increased emphasis on career development, more attention to outcomes, and the requirement for incorporating more quantitative thinking in the biomedical curriculum.

### **Contemporary Leadership Challenges**

There is still today much discussion about whether some drugs that the government deems as dangerous should be decriminalized. The U. S. Government imposes fines and imprisonment for the possession and use of marijuana, while the most harmful drug, alcohol and its known dangers, remains legal and extremely abused. The U. S. Government views itself as the world's protectors, yet it imprisons many of its citizens for exercising the right to choose their own lifestyle. If it is a lifestyle that does not bring harm to others, why should the government interfere? This book, A casualty of war, the war on drugs, the war within, is a about a black soldier whose life and the lives of his family were changed forever because of such unjust and inhumane laws. William Francis was introduced to drugs during his first tour in Germany. For much of his military life he used marijuana to cope with racism and other forms of discrimination. The book details the external problems he faced in the military and civilian life and the internal war raging within him because of his religious beliefs. It tells how his wife views his use of marijuana; in that it poses a risk to the family's welfare and his military career if his use is discovered. She and others know that he is more than functional under the influence of marijuana. Determine for yourself whether or not what finally happened to William is justified. And then, if you can without bias and self-righteousness, determine for yourself if the laws are protecting people or unjustly depriving them of their right to real freedom.
