Among the Powers of the Earth

Thirty years ago, our global energy landscape did not look remarkably different from what it does today. Three or four decades from now, it certainly will: dwindling oil reserves will clash with skyrocketing demand, as developing nations around the world lead their citizens into the modern energy economy, and all the while, the grave threat of catastrophic climate change looms ever larger. Energy worries are at an all-time high—just how will we power our future? With

The Powers That Be, Scott L. Montgomery cuts through the hype, alarmism, and confusion to give us a straightforward, informed account of where we are now, and a map of where we're going. Starting with the inescapable fact of our current dependence on fossil fuels—which supply 80% of all our energy needs today—Montgomery clearly and carefully lays out the many alternative energy options available, ranging from the familiar, like water and solar, to such nascent but promising sources as hydrogen and geothermal power. What is crucial, Montgomery explains, is understanding that our future will depend not on some single, wondrous breakthrough; instead, we should focus on developing a more diverse, adaptable energy future, one that draws on a variety of sources—and is thus less vulnerable to disruption or failure. An admirably evenhanded and always realistic guide, Montgomery enables readers to understand the implications of energy funding, research, and politics at a global scale. At the same time, he doesn't neglect the ultimate connection between those decisions and the average citizen flipping a light switch or sliding behind the wheel of a car, making *The Powers That Be* indispensable for our ever-more energy conscious age.

Literacy remains a contentious and polarized educational, media and political issue. What has emerged from the continuing debate is a recognition that literacy in education is allied closely with matters of language and culture, ideology and discourse, knowledge and power. Drawing perspectives variously from critical social theory and cultural studies, poststructuralism and feminisms, sociolinguistics and the ethnography of communication, social history and comparative education, the contributors begin a critical interrogation of taken-for-granted assumptions which have guided educational policy, research and practice.

definitive manual for anyone interested in gaining, observing, or defending against ultimate control – from the author of *The Laws of Human Nature*. In the book that *People* magazine proclaimed “beguiling” and “fascinating,” Robert Greene and Joost Elffers have distilled three thousand years of the history of power into 48 essential laws by drawing from the philosophies of Machiavelli, Sun Tzu, and Carl Von Clausewitz and also from the lives of figures ranging from Henry Kissinger to P.T. Barnum. Some laws teach the need for prudence (“Law 1: Never Outshine the Master”), others teach the value of confidence (“Law 28: Enter Action with Boldness”), and many recommend absolute self-preservation (“Law 15: Crush Your Enemy Totally”). Every law, though, has one thing in common: an interest in total domination. In a bold and arresting two-color package, *The 48 Laws of Power* is ideal whether your aim is conquest, self-defense, or simply to understand the rules of the game.

Earth in 2064 is politically corrupt and in economic decline. The Long Depression has dragged on for 56 years, and the Bureau of Sustainable Research is hard at work making sure that no new technologies disrupt the planned economy. Ten years ago a band of malcontents, dreamers, and libertarian radicals bolted privately-developed anti-gravity drives onto rusty sea-going cargo ships, loaded them to the gills with 20th-century tunnel-boring machines and earthmoving equipment, and set sail - for the Moon. There, they built their retreat. A lunar underground border-town, fit to rival Ayn Rand's 'Galt's Gulch', with American capitalists, Mexican hydroponic farmers, and Vietnamese space-suit mechanics - this is the city of Aristillus. There's a problem, though: the economic decline of Earth under a command-and-control economy is causing trouble for the political powers-that-be in Washington DC and elsewhere. To shore up their positions they need slap down the lunar expats and seize the gold they've been mining. The conflicts start small, but rapidly escalate. There are zero-gravity gun fights in rusted ocean going ships flying through space, containers full of bulldozers hurtling through

Powers of Theory

Paul Kennedy's classic naval history, now updated with a new introduction by the author This acclaimed book traces Britain's rise and fall as a sea power from the Tudors to the present day. Challenging the traditional view that the British are natural 'sons of the waves', he suggests instead that the country's fortunes as a significant maritime force have always been bound up with its economic growth. In doing so, he contributes significantly to the centuries-long debate between 'continental' and 'maritime' schools of strategy over Britain's policy in times of war. Setting British naval history within a framework of national, international, economic, political and strategic considerations, he offers a fresh approach to one of the central questions in British history. A new introduction extends his analysis into the twenty-first century and reflects on current American and Chinese ambitions for naval mastery. Unmasking the Powers

Military Strategy of Middle Powers explores to what degree twenty-first-century middle powers adjust their military strategies due to changes in the international order, such as the decline in US power. The overarching objective of the book is to explain continuity and change in the strategies of a group of middle powers during the twenty-first century. These strategies are described, compared, and explained through the lens of Realism. In order to find potential explanations for change or continuity within the cases, as well as for similarities and differences between the cases, the strategies of 11 'middle' powers are analysed (Canada, Germany, Italy, Spain, Australia, Brazil, Indonesia, South Africa, India, Japan, and South Korea). This group of countries are considered similar in several important aspects, primarily regarding relative power capacity. When searching for potential explanations for different strategic behaviours among the middle powers, their unique regional characteristics are a key focus and, consequently, the impact of the structure and polarity, as well as the patterns of amity and enmity, of the regional context are analysed. The empirical investigation is focused on security strategies used since the terrorist attacks 9/11 2001, which was one of the first major challenges to US hegemony. This

book will be of much interest to students of military and strategic studies, foreign policy, and International Relations in general.

The term "middle power" is conceptually fragile. Some scholars have even argued for abandoning it. This book argues that the concept needs to be analysed more profoundly and that new analytical tools need to be developed to better understand the phenomenon. The traditional approach, based on Western states, is insufficient and has become increasingly irrelevant in a transformed global environment. Instead of drawing from a single theory of international relations, the contributors have chosen to build upon a wide range of theories in a deliberate demonstration of analytic eclecticism. A pluralistic approach provides stronger explanations while remaining analytically and intellectually rigorous. Many of the theory contributions are reconsidering how the largely "Western" bases of such theorising need revising in light of the "emerging middle powers", many of which are in Asia. Presenting a strong argument for studying middle powers, this book explores both the theory and empirical applications of the concept by rethinking the definition and characteristics of middle powers using a range of case studies. It examines changes in the study of middle powers over the last decade, proposing to look at the concept of middle powers in a coherent and inclusive manner. Finally, it aims to further the discussion on the evolution of the

international system and provides sound conclusions about the theoretical usefulness and empirical evolution of middle powers today.

The 48 Laws of Power

In our fast-paced secular world, God and theology are second-class citizens. Money, politics, sports, and science seem better suited to the hard realities of our world. As the church steeple has been eclipsed by the skyscraper as the centerpiece of the urban landscape, so has the divine realm been set aside in favor of more immediate human experience. One sad consequence of this shift is the loss of spiritual and theological bearings, most clearly evident in our inability to understand or speak about such things. If the old way of viewing the universe no longer works, something else has to replace it. *The Powers That Be* reclaims the divine realm as central to human existence by offering new ways of understanding our world in theological terms. Walter Wink reformulates ancient concepts, such as God and the devil, heaven and hell, angels and demons, principalities and powers, in light of our modern experience. He helps us see heaven and hell, sin and salvation, and the powers that shape our lives as tangible parts of our day-to-day experience, rather than as mysterious phantoms. Based on his reading of the Bible and analysis of the world around him, Wink creates a whole new language for talking about and to God. Equipped with this fresh world view, we can embark on a new relationship with God and our world into the next millennium. From the Hardcover edition.

Sustaining Life

While scholars have often found value in comparing Wisdom and Romans, a comparison of the use of personification in these works has not yet been made, despite the striking parallels between them. Furthermore, while scholars have studied many of these personifications in detail, no one has investigated an individual personification with respect to the general use of the trope in the work. Instead, most of this research focuses on a personification in relation to its nature as either a rhetorical device or a supernatural power. The 'Powers' of Personification seeks to push beyond this debate by evaluating the evidence in a different light - that of its purpose within the overall use of personification in the respective work and in comparison with another piece of contemporaneous theological literature.

The Powers of the Earth

Angels, Spirits, principalities, powers, gods, Satanthese, along with all other spiritual realities, are the unmentionables of our culture. The dominant materialistic worldview has absolutely no place for them. But materialism itself is terminally ill, and, let us hope, in process of replacement by a worldview capable of honoring the lasting values of modern science without succumbing to reductionism. Therefore, we find ourselves returning to the ancient

traditions, searching for wisdom wherever it may be found. We do not capitulate to the past and its superstitions, but bring all the gifts our race has acquired along the way as aids in recovering the lost language of our souls. In *Naming the Powers* I developed the thesis that the New Testament's principalities and powers is a generic category referring to the determining forces of physical, psychic, and social existence. In the present volume we will be focusing on just seven of the Powers mentioned in Scripture. Their selection out of all the others dealt with in *Naming the Powers* is partly arbitrary: they happen to be ones about which I felt I had something to say. But they are also representative, and open the way to comprehending the rest. They are: Satan, demons, angels of churches, angels of nations, gods, elements, and angels of nature.

The Power

Powers and Capacities in Philosophy is designed to stake out an emerging, discipline-spanning neo-Aristotelian framework grounded in realism about causal powers. The volume brings together for the first time original essays by leading philosophers working on powers in relation to metaphysics, philosophy of natural and social science, philosophy of mind and action, epistemology, ethics and social and political philosophy. In each area, the concern is to show how a commitment to real causal powers affects discussion at the level in question. In metaphysics, for example, realism about powers is now recognized as providing an alternative to orthodox accounts of causation, modality, properties and laws. Dispositional realist philosophers of science, meanwhile, argue that a powers ontology allows for a proper account of the nature of scientific explanation. In the philosophy of mind there is the suggestion that agency is best understood in terms of the distinctive powers of human beings. Those who take virtue theoretic approaches in epistemology and ethics have long been interested in the powers that allow for knowledge and/or moral excellence. In social and

political philosophy, finally, powers theorists are interested in the powers of sociological phenomena such as collectivities, institutions, roles and/or social relations, but also in the conditions of possibility for the cultivation of the powers of individuals. The book will be of interest to philosophers working in any of these areas, as well as to historians of philosophy, political theorists and critical realists.

Engaging the Powers

From the historical roots of AIDS activism in the struggle for African liberation to the everyday work of community education in Khayelitsha, *Sustaining Life* tells the story of how the rights-based South African AIDS movement successfully transformed public health institutions, enabled access to HIV/AIDS treatment, and sustained the lives of people living with the disease. Typical accounts of the South African epidemic have focused on the political conflict surrounding it, Theodore Powers observes, but have yet to examine the process by which the national HIV/AIDS treatment program achieved near-universal access. In *Sustaining Life*, Powers demonstrates the ways in which non-state actors, from caregivers to activists, worked within the state to transform policy and state-based institutions in order to improve health-based outcomes. He shows how advocates in the South African AIDS movement channeled the everyday experiences of poor and working-class people living with HIV/AIDS into tangible policy changes at varying institutional levels, revealing the primacy of local action for expanding treatment

access. In his analysis of the transformation of the state health system, Powers addresses three key questions: How were the activists of the movement able to overcome an AIDS-dissident faction that was backed by government power? How were state health institutions and HIV/AIDS policy transformed to increase public sector access to treatment? Finally, how should the South African campaign for treatment access inform academic debates on social movements, transnationalism, and the state? Based on extended participant observation and in-depth interviews with members of the South African AIDS movement, *Sustaining Life* traces how the political principles of the anti-apartheid movement were leveraged to build a broad coalition that changed national HIV/AIDS policy norms and highlights how changes in state-society relations can be produced by local activism.

The frailty that was a liability in the military allows her to gain the trust of the Petaybean natives. But miraculously, with Yana's relocation to the arctic planet comes the return of her health and strength.

And the closer she gets to the people of Petaybee, the more determined she is to protect her new home. For something unusual and wonderful is happening on Petaybee. Something worth fighting for, even dying for—but especially, something worth living for. . . .

The Powers that Punish

For most Americans, the Revolution's main achievement is summed up by the phrase "life, liberty, and the pursuit of happiness." Yet far from a straightforward attempt to be free of Old World laws and customs, the American founding was also a bid for inclusion in the community of nations as it existed in 1776. America aspired to diplomatic recognition under international law and the authority to become a colonizing power itself. As Eliga Gould shows in this reappraisal of American history, the Revolution was an international transformation of the first importance. To conform to the public law of Europe's imperial powers, Americans crafted a union nearly as centralized as the one they had overthrown, endured taxes heavier than any they had faced as British colonists, and remained entangled with European Atlantic empires long after the Revolution ended. No factor weighed more heavily on Americans than the legally plural Atlantic where they hoped to build their empire. Gould follows the region's transfiguration from a fluid periphery with its own rules and norms to a place where people of all descriptions were expected to abide by the laws of Western Europe—"civilized" laws that precluded neither slavery nor the dispossession of Native Americans.

Intent and Intentions

The leader's portrait, produced in a variety of media (statues, coins, billboards, posters, stamps), is a key instrument of propaganda in totalitarian regimes, but increasingly also dominates political communication in democratic countries as a result of the personalization and spectacularization of campaigning. Written by an international group of contributors, this volume focuses on the last one hundred years, covering a wide range of countries around the globe, and dealing with dictatorial regimes and democratic systems alike. As well as discussing the effigies that are produced by the powers that be for propaganda purposes, it looks at the uses of portraiture by antagonistic groups or movements as forms of resistance, derision, denunciation and demonization. This volume will be of interest to researchers in visual studies, art history, media studies, cultural studies, politics and contemporary history.

The Best and the Brightest, The Fifties, and other acclaimed histories turns his investigative eye to the rise of the American media in the twentieth century. Focusing on the successes and failures of CBS Television, Time magazine, the Washington Post, and the Los Angeles Times, David Halberstam paints a portrait of the era when large, powerful mainstream media sources emerged as a force, showing how they shifted from simply reporting the news to becoming a part of it. By examining landmark events such as Franklin D. Roosevelt's masterful use of the radio and the unprecedented coverage of the Watergate break-in, Halberstam demonstrates how print and broadcast media as a whole became a player in society and helped shape public policy. Drawn from hundreds of exhaustive interviews with insiders at each company, and hailed by the Seattle Times as "a monumental X-ray study of power," The Powers That Be reveals the tugs-of-war between political ambition and the quest for truth in a page-turning read.
