This book presents a selection of studies that have applied Operational Research methods to improve emergency planning in healthcare, to include both A&E and public health emergencies like epidemic and natural disasters. The studies have delved into qualitative Operational Research like Problem Structuring, Critical Systems Thinking, Soft Systems Methodology, and Qualitative System Dynamics, and also quantitative techniques such as Monte Carlo Simulation, Discrete-event Simulation, and System Dynamics. These techniques have been applied for review and assessment of emergency services, for policy formulation and for facilitating broader public engagement in emergency preparedness and response. Furthermore, this book presents rigorous reviews on the applications of Operational Research in the wider healthcare context. This volume focuses mainly on emergency planning at the strategic level, whereas volume 1 focuses on planning at the operational level. The OR Essentials series presents a unique cross-section of high quality research work fundamental to understanding contemporary issues and research across a range of Operational Research (OR) topics. It brings together some of the best research papers from the highly respected journals of the Operational Research Society, also published by Palgrave Macmillan.

Radio Four has been described as 'the greatest broadcasting channel in the world', the 'heartbeat of the BBC', a cultural icon of Britishness, and the voice of Middle England. Defined by its rich mix, encompassing everything from journalism and drama to comedy, quizzes, and short-stories. Many of its programmes - such as Today ,The Archers, Woman's Hour, The Hitchhiker's Guide To the Galaxy, Gardeners' Question Time, and The Shipping Forecast - have been part of British life for decades. Others, less successful, have caused offence and prompted derision. Born as it was in the Swinging Sixties, Radio Four's central challenge has been to change with the times, while trying not to lose faith with those who see it

as a standard-bearer for quality, authoritativeness, or simply 'old-fashioned' BBC values. In this first major behind-the-scenes account of the station's history, David Hendy - a former producer for Radio Four - draws on privileged access to the BBC's own archives and new interviews with key personnel to illuminate the arguments and controversies behind the creation of some of its most popular programmes. He reveals the station's struggle to justify itself in a television age, favouring clear branding and tightly-targeted audiences, with bitter disputes between the BBC and its fiercely loyal listeners. The story of these struggles is about more than the survival of one radio network: Radio Four has been a lightning rod for all sorts of wider social anxieties over the past forty years. A kaleidoscopic view of the changing nature of the BBC, the book provides a gripping insight into the very nature of British life and culture in the last decades of the twentieth century.

Peterson's Guide to Graduate Programs in Engineering and Applied Sciences

The motivation for this book stems from an early exposure to the book Applied Mechanics by John Perry. Professor Perry strove to encourage his readers to understand the applications and use of mathematics in engineering without insisting that they become immersed in pure mathematics. The following text uses this approach to the application of telecommunications switching. Readers wishing to study the derivation and proof of formulas will be able to do so using relevant references. The existence of low-cost programmable calculators frees practicing engineers from much laborious calculation, allowing more time for creative design and application of the art. The reader should not need to be able to derive formulas in order to apply them just as, to quote Professor Perry, "He should not have to be able to design a watch in order to tell time The material for this book has been drawn from my own experience in the field. Inevitably, however, I have

used CCITT and Bell System publications for references and in some cases quotation, and I gratefully acknowledge permission for their use. I am also grateful to Stromberg Carlson Corporation for their earlier encouragement and support without which this book would not have been possible. Thanks are also due to Fred Hadfield for his advice and assistance in the preparation of the many figures and to my wife Ada for her support and patience as I pursued the demanding but interesting task of producing the text.

New York Supreme Court

Life On Air

A comprehensive and research-based text detailing the important relationship between school administration and human resources administration. "The author provides [students] with specific strategies for navigating the treacherous waters of personnel selection, development, retention, and removal. I wish I had the book when I began my work as Director of Personnel." —Zach Kelehear University of South Carolina Human Resources Administration for Educational Leaders balances theory and pedagogy to demonstrate the historical evolution of the human resources function in education, the link between human resources and

organizational effectiveness, and the new trends in human resources accountability. Key Features and Benefits: Provides students with samples of the tools that practicing HR administrators use for planning, recruiting, interviewing, selecting, evaluating, compensating, and developing staff personnel Dedicates separate chapters to areas often neglected in other texts: collective bargaining, human resources responsibility for classified personnel, accountability, and organizational climate and the human resources function Features engaging simulations in the form of case studies and critical questions to help students apply the concepts to practice Accompanied by High-Quality Ancillaries Instructors' Resources on CD-ROM includes a test bank, sample syllabi, PowerPoint slide presentations, and more.
