The National Assembly of Pakistan Debates

Opening the Black Box: Contextual Drivers of Social Accountability fills an important knowledge gap by providing guidance on how to assess contextual drivers of social accountability effectiveness. This publication aims to more strategically support citizen engagement at the country level and for a specific issue or problem. The report proposes a novel framing of social accountability as the interplay of constitutive elements: citizen action and state action, supported by three enabling levers: civic mobilization, interface and information. For each of these constitutive elements, the report identifies 'drivers' of contextual effectiveness which take into account a broad range of contextual factors (e.g., social, political and intervention-based, including information and communication technologies). Opening the Black Box offers detailed guidance on how to assess each driver. It also applies the framework at two levels. At the country level, the report looks at 'archetypes' of challenging country contexts, such as regimes with no formal space or full support for citizen-state engagement and fragile and conflict-affected situations. The report also illustrates the use of the framework to analyze specific social accountability interventions through four case studies: Sierra Leone, Pakistan, Yemen, and the Kyrgyz Republic.

Books from Pakistan

Law - Environment - Africa compiles the proceedings of the 5th Symposium and the 4th Scientific Conference of the Association of Environmental Law Lecturers from African Universities (ASSELLAU) in cooperation with the Climate Policy and Energy Security Programme for Sub-Saharan Africa run by the Konrad-Adenauer-Stiftung (KAS) and the United Nations Environment Programme (UNEP). The book's aim is to explore, review and analyse recent developments at the point where

the law and the environment in Africa overlap. The collection comprises 32 chapters by legal experts from central, eastern, southern and western Africa. It is divided thematically into four parts: 1.) Climate change and energy 2.) Natural resource governance 3.) Water governance, management and use 4.) The role of the law in regulating social and environmental impacts associated with human activity These subjects are discussed in the context of national, regional and international law frameworks, which are central to Africa's quest to attain its desired and sustainable development trajectory within the confines of the continent's valuable yet fragile ecological infrastructure.

National Union Catalog

The electric vehicle and plug-in hybrid electric vehicle play a fundamental role in the forthcoming new paradigms of mobility and energy models. The electrification of the transport sector would lead to advantages in terms of energy efficiency and reduction of greenhouse gas emissions, but would also be a great opportunity for the introduction of renewable sources in the electricity sector. The chapters in this book show a diversity of current and new developments in the electrification of the transport sector seen from the electric vehicle point of view: first, the related technologies with design, control and supervision, second, the powertrain electric motor efficiency and reliability and, third, the deployment issues regarding renewable sources integration and charging facilities. This is precisely the purpose of this book, that is, to contribute to the literature about current research and development activities related to new trends in electric vehicle power trains.

The conference proceedings of: International Conference on Industrial Electronics, Technology & Automation (IETA 05) International Conference on Telecommunications and Networking (TeNe 05) International Conference on Engineering Education, Instructional Technology, Assessment, and E-learning (EIAE 05) include a set of rigorously reviewed world-class manuscripts addressing and detailing state-of-the-art research projects in the areas of: Industrial Electronics, Technology and Automation, Telecommunications, Networking, Engineering Education, Instructional Technology and e-Learning. The three conferences, (IETA 05, TENE 05 and EIAE 05) were part of the International Joint Conference on Computer, Information, and System Sciences, and Engineering (CISSE 2005). CISSE 2005, the World's first Engineering/Computing and Systems Research E-Conference was the first high-caliber Research Conference in the world to be completely conducted online in real-time via the internet. CISSE received 255 research paper submissions and the final program included 140 accepted papers, from more than 45 countries. The whole concept and format of CISSE 2005 was very exciting and ground-breaking. The powerpoint presentations, final paper manuscripts and time schedule for live presentations over the web had been available for 3 weeks prior to the start of the conference for all registrants, so they could pick and choose the presentations they want to attend and think about questions that they might want to ask. The live audio presentations were also recorded and are part of the permanent CISSE archive, which includes all power point presentations, papers and recorded presentations. All aspects of the conference were managed on-line; not only the reviewing, submissions and registration processes; but also the actual conference. Conference participants - authors, presenters and attendees - only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground-breaking conference. The on-line structure of this high-quality event allowed academic professionals and industry participants to contribute work and attend world-class technical presentations based on rigorously refereed submissions, live, without the need for investing significant travel funds or time out of the office. Suffice to say that CISSE received submissions from more than 50 countries, for whose researchers, this opportunity presented a much more affordable, dynamic and well-planned event to attend and submit their work to, versus a classic, on-the-ground conference. The CISSE conference audio room provided superb audio even over low speed internet connections, the ability to display PowerPoint presentations, and cross-platform compatibility (the conferencing software runs on Windows, Mac, and any other operating system that supports Java). In addition, the conferencing system allowed for an unlimited number of participants, which in turn granted CISSE the opportunity to allow all participants to attend all presentations, as opposed to limiting the number of available seats for each session. The implemented conferencing technology, starting with the submission & review system and ending with the online conferencing capability, allowed CISSE to conduct a very high quality, fulfilling event for all participants. See: www.cissee2005.org, sections: IETA, TENE, EIAE

Although access to financing in Pakistan is expanding quickly, it is two to four times lower than regional benchmarks. Half of Pakistani adults, mostly women, do not engage with the financial system at all, and only 14 percent have access to formal services. Credit for small- and medium-size enterprises is rationed by the financial system. The formal microfinance sector reaches less than 2 percent of the poor, as opposed to more than 25 percent in neighboring countries. Yet it is the micro- and small businesses, along with remittances, that help families escape the poverty trap and participate in the economy. 'Bringing Finance to Pakistan's Poor' is based on a pioneering and comprehensive survey and dataset that measures the access to financial products by Pakistani households. The survey included 10,305 households in all areas of the country, excluding the tribal regions. The accompanying CD contains summary statistics. The authors develop a picture of access to and usage of financial services across the country and across different population groups, and they identify policy and regulatory priorities. Reform measures in Pakistan have been timely, but alone are not enough; financial institutions have lagged behind in adopting technology, segmenting customer bases, diversifying products, and simplifying processes and procedures. Gender bias and low levels of financial literacy remain barriers, as is geographical remoteness. However, the single strongest cause of low financial access is lack of income not location, education, or even gender. 'Bringing Finance to Pakistan's Poor' will be of great interest to readers working in the areas of business and finance, economic policy, gender and rural development, and microfinance.

Information techniques for irrigation systems: Selected proceedings of the Second International Network Meeting on Information Techniques for Irrigation Systems held in Lahore/Bahawalnagar, Pakistan, 5-8 December 1994

This is an incredibly interesting book on an increasingly pertinent topic. . . the book is succinctly written and provides a comprehensive overview of EU law. . . providing a really useful analysis of the European cases concerned with the imposition of a duty to deal in relation to intellectual property. . . This book is a thoroughly enjoyable read, and perhaps because of its brevity the author retains her focus on the central issues being examined. I found it to be engaging and thought provoking. Jane Nielsen, Competition and Consumer Law Journal The book caters for various groups ranging from those with a general interest in competition law, patent law and/or biopharmaceuticals, to students who want to understand how competition and intellectual property work in practice (or to understand the interface between the two policies), and from practitioners and policymakers to people within the biopharmaceutical industry itself. Journal of Intellectual Property Rights Using the example of research tools in biopharmaceutical research and innovation, this book examines the complexities of the relationship between two fundamental areas of law and policy intellectual property rights and competition law. It addresses a question that is certain to become paramount in other industries also: how to strike the

balance between initial and follow-on innovation so as to ensure that access to essential research tools (or other fundamental elements to follow-on innovation) is not impeded. The book concludes by suggesting how competition law could be used to complement the patent balance. Competition Law and Patents caters for various groups ranging from those with a general interest in competition law, patent law and/or biopharmaceuticals, to students who want to understand how competition and intellectual property work in practice (or to understand the interface between the two policies), and from practitioners and policymakers to people within the biopharmaceutical industry itself.

"This handbook is intended to enable national judges in all types of tribunals in both civil law and common law jurisdictions to identify environmental issues coming before them and to be aware of the range of options available to them in interpreting and applying the law. It seeks to provide judges with a practical guide to basic environmental issues that are likely to arise in litigation. It includes information on international and comparative environmental law and references to relevant cases."--P. iii.
