Barron's ACT

Journalist Richard Schweid first learned the strange facts of the freshwater eel's life from a fisherman in a small Spanish town just south of Valencia. "The eeler who explained the animal's life cycle to me did so as he served up an eel he had just taken from a trap, killed, cleaned, and cooked in olive oil in an earthenware dish," writes Schweid. "I ate it with a chunk of fresh, crusty bread. It was delicious. I was immediately fascinated." As this engaging culinary and natural history reveals, the humble eel is indeed an amazing creature. Every European and American eel begins its life in the Sargasso Sea--a vast, weedy stretch of deep Atlantic waters between Bermuda and the Azores. Larval eels drift for up to three years until they reach the rivers of North America or Europe, where they mature and live as long as two decades before returning to the Sargasso to mate and die. Eels have never been bred successfully in captivity. Consulting fisherfolk, cooks, and scientists, Schweid takes the reader on a global tour to reveal the economic and gastronomic importance of eel in places such as eastern North Carolina, Spain, Northern Ireland, England, and Japan. (While this rich yet mild-tasting fish has virtually disappeared from U.S. tables, over \$2 billion worth of eel is still eagerly consumed in Europe and Asia each year.) The book also includes recipes, both historic and contemporary, for preparing eel.

McGraw-Hill Education: 10 ACT Practice Tests, Fifth Edition

As the current recession ends, many workers will not be returning to the jobs they once held--those jobs are gone. In *The New Division of Labor*, Frank Levy and Richard Murnane show how computers are changing the employment landscape and how the right kinds of education can ease the transition to the new job market. The book tells stories of people at work--a high-end financial advisor, a customer service representative, a pair of successful chefs, a cardiologist, an automotive mechanic, the author Victor Hugo, floor traders in a London financial exchange. The authors merge these stories with insights from cognitive science, computer science, and economics to show how computers are enhancing productivity in many jobs even as they eliminate other jobs--both directly and by sending work offshore. At greatest risk are jobs that can be expressed in programmable rules--blue collar, clerical, and similar work that requires moderate skills and used to pay middle-class wages. The loss of these jobs leaves a growing division between those who can and cannot earn a good living in the computerized economy. Left unchecked, the division threatens the nation's democratic institutions. The nation's challenge is to recognize this division and to prepare the population for the high-wage/high-skilled jobs that are rapidly growing in number--jobs involving extensive problem solving and interpersonal communication. Using detailed examples--a second grade classroom, an IBM managerial training program, Cisco Networking Academies--the authors describe how these skills can be taught and how our adjustment to the computerized workplace can begin in earnest.
